A - Eyepiece

B - Windage Adjustment

C - Elevation Adjustment

D - Objective Lens

E - Diopeter Adjustment

Mounting the Sight

The Ghost magnifier is designed to operate behind red dot sights. Allow enough space between the 2 items to rotate freely. When not in use, simply flip the optic to the side.

The mount attaches to a 1913 Picatinny style rail. First loosen the mounting bolts with the included T15 Torx wrench, install into position on your weapon's rail system, and then hand tighten plus 1/4 turn (approximately 30 in-lbs).

The height of the optic center point is exactly 1.55 inches from the rail top.

Adjusting the sight

Elevation Adjustments - Top Dial. Adjust this setting to align the red dot vertically within the magnifier. Rotating this dial counter-clockwise will lower the aim point and raise your impact point. Rotating it clockwise will raise the aim point and lower your impact point.

Windage Adjustments - Side Dial. Adjust this setting to align the red dot horizontally within the magnifier. Rotating this dial counter-clockwise will move the aim point left and move your impact point right. Rotating it clockwise will move the aim point right and move your impact point left.

The Ghost magnifier features an adjustable diopter on the eyepiece. Rotate this setting to sharpen the red dot sight.

Maintenance

- This device is fully sealed and IPX7 waterproof. Make sure to fully tighten the caps to prevent moisture and dirt entering the internals.
- Always clean the lenses and surfaces with a clean microfiber cloth. Other materials may scratch the glass or surfaces.
